

MMA7361

Accelerometer

Congratulations on your purchase of the MMA7361 Accelerometer. This guide is designed to help you get started using the Accelerometer with your next Arduino project by giving you the pin-out, and recommended samples (reference Virtuabotix.com or the link below for code and other resources).

Pin-Out:

Sample Code:

The most current resources for this product can be found at <http://feed.Virtuabotix.com/?p=189>, or through the main site at www.virtuabotix.com.

For now all of the resources are full source examples that do not require any additional libraries, but you should check back often as a library is currently in development for this and many other products.

The example code is well documented and should provide all the needed information on what is being done, but if you have any problems you are always welcome to join us at one of our regularly scheduled events. (Reference the main site for more information on dates and times).

Happy coding, and best of luck with your Arduino projects!
